I. INTRODUCTION

The purpose of this article is to present a brief primer of the "public interest" standard that the Federal Communications Commission ("FCC" or "Commission") uses in reviewing mergers pursuant to the Communications Act. As outlined more fully below, precedent dictates that the FCC has independent (and indeed broader) authority to review communications industry mergers separate from the authority bestowed upon the Department of Justice ("DOJ") or Federal Trade Commission ("FTC"), and that this public interest review provides a useful and unique purpose. To the extent the FCC finds that the proposed transaction harms the public interest in some way, the Commission is well within its public interest authority to issue narrowly-tailored conditions to its approval of the merger.

However, precedent also dictates that the FCC's "public interest" authority is not unfettered. The public interest test requires an analysis of economic and competitive considerations, and the courts have sometimes rebuked the FCC
for not being consistent in this analysis. Absent a clear nexus to any merger-related harm, the FCC should not use case-specific merger adjudications to achieve indirectly via coerced "voluntary commitments" what it cannot do directly via rulemakings to accommodate particular political constituencies. Indeed, despite the FCC’s mantra over the last decade or so that a merger must "enhance competition," the case law simply does not support such an expansion of power. To the contrary, the case law is clear that the FCC is bound by the same standard as antitrust enforcement agencies in that the agency cannot "subordinate the public interest to the interest of 'equalizing competition among competitors.'" Accordingly, if there are generic, unresolved policy issues—such as the increasingly contentious issue of network neutrality—then those issues are better handled in formal industry-wide inquiries or rulemakings where they can be effectively dealt with in a comprehensive manner. Important issues of public policy should not be decided in the course of closed negotiations over merger conditions in which only the regulator and the regulated entity participate. In contrast, Notices of Proposed Rulemakings ("NPRMs") or, at minimum, Notices of Inquiry ("NOIs"), have the benefit of offering the public a complete opportunity to comment on proposals and also result in consistent, industry-wide resolution of issues that apply across the board and, hopefully, stand the test of time.

II. WHY DOES THE FCC HAVE THE AUTHORITY TO REVIEW INDUSTRY MERGERS?

Every few years, and usually in the context of an important telecom or media merger, policymakers and regulated companies alike question whether the FCC’s review of communications industry mergers is necessary. The DOJ and the FTC have authority to review mergers under antitrust laws, and courts supervise and review this process through Tunney Act proceedings. While de-

5 15 U.S.C. § 16 (2006). For a good explanation of the Tunney Act process, see Law-
bates continue about how vigorously various presidential administrations approach the antitrust process, there is very little serious debate over whether the antitrust Hart-Scott-Rodino merger pre-approval process is an important (and sometimes dramatic) check on market power. Yet, given the FCC’s recent proclivity to require merged entities to accept voluminous “voluntary” merger commitments after months of protracted delay, many scholars legitimately contend that the FCC has no place in reviewing telephone, cable, broadcast, and wireless industry mergers in addition to DOJ or FTC review. As such, it is appropriate to explore precisely what FCC review adds to this process.

First, FCC has the authority—and the obligation—to review industry mergers because it is the current law. For example, under Section 214(a), “No carrier . . . shall acquire or operate any line” without first obtaining from the Commission a certificate of public convenience and necessity. Similarly, pursuant to Section 310(d), the Commission must find that any transfer of a permit or license serves the public interest, convenience, and necessity. Moreover, the Communications Act gives the FCC the authority to impose conditions on transactions so long as those conditions are consistent with applicable law. For example, Section 214(c) of the Communications Act states that the Commission “may attach to the issuance of [a 214] certificate such terms and conditions as in its judgment the public convenience and necessity may require.”

Section 303(r) provides that “[e]xcept as otherwise provided in this Act, the Commission . . . shall . . . prescribe such . . . conditions, not inconsistent with

6 See, e.g., David A. Balto, Antitrust Enforcement in the Clinton Administration, 9 CORNELL J.L. & PUB. POL’Y 61, 64 (1999).

9 Id. § 310(d).

10 Id. § 214(c).
law, as may be necessary to carry out the provisions of this Act.”

Given the complexity of the communications industry, Congress understood that while a primary examination of competitive issues by antitrust enforcement agencies is important, the FCC also needs to consider a number of other factors that are not part of the typical Hart-Scott-Rodino antitrust merger review process. Several of those factors are discussed in Section III below. While the antitrust agencies (via the Hart-Scott-Rodino process) are in an excellent position to address whether a particular merger would “substantially lessen competition,” the Clayton Act standard does not account for how the continuing presence of other residual “public interest” obligations required by law—most notably universal service requirements, issues of public health and safety, foreign ownership restrictions, etc.—affects firms’ conduct and industry structure. Moreover, this dual-review process is not unique to the communications industry, as Congress also established a dual-review process for other complex industries, such as electricity and banking, where a similar dynamic analysis of non-traditional factors must be taken into account.

In addition, the antitrust enforcement agencies simply may not have the industry expertise to understand all of the complexities and nuances of the tele-

11 Id. at § 303(r) (emphasis added).
12 See H.R. Rep. No. 104-458, at 201 (1996) (Conf. Rep.) (explaining that even though the Act removes the FCC’s ability to insulate telecommunications companies from DOJ antitrust review, it does not remove its ability to review for licensing purposes).
13 See discussion infra Part III.
18 See United States v. FCC, 652 F.2d 72, 88 (D.C. Cir. 1980) (“[R]esolution of the sometimes-conflicting public interest considerations ‘is a complex task which requires extensive facilities, expert judgment and considerable knowledge of the * * * industry. Congress left that task to the Commission . . . .’”) (quoting McLean Trucking Co. v. United States, 321 U.S. 67, 87 (1944)).
In light of rapid technological change, using the DOJ/FTC Horizontal Merger Guidelines ("Merger Guidelines") as the only guidepost for reviewing industry transactions could force the merger review process to rely solely upon a rigid, static view of industry structure. Moreover, the Merger Guidelines are simply not designed to account for the myriad of FCC rulemakings and adjudications that occur literally everyday and which often affect any static competitive analysis. For both of these reasons, it is not uncommon for the FCC to detail staff and lend its expertise to the DOJ or FTC to assist in those agencies' reviews of communications industry mergers under the Clayton Act.

Courts have long recognized the FCC’s unique expertise in dealing with the sometimes Byzantine aspects of communications industries. Indeed, in 2005, the Supreme Court noted that because the FCC must make difficult decisions regarding issues that “involve a ‘subject matter [that] is technical, complex, and dynamic,’” the “Commission is in a far better position to address these questions than [a court of general jurisdiction].”

Recent communications industry transactions present a particularly compelling case for independent FCC review because many of the recent deals flow directly from FCC policy decisions that favor facilities-based entry or “intermodal competition” over other alternatives. Indeed, as technology continues to facilitate convergence among competing distribution platforms, the logical

---

outcome of a policy focus on "inter-modal competition" has been a phase of "intra-modal mergers" among similarly situated companies seeking to maximize economies of scale and scope.\textsuperscript{26} Given the direct interrelationship between these mergers and regulatory policy, the FCC stands in an important position to determine whether these proposed intra-modal transactions will advance Congress' long-standing policy mandate that "all the people of the United States [shall have access to] a rapid, efficient, Nation-wide, and worldwide . . . communication service with adequate facilities at reasonable charges . . . ."\textsuperscript{27}

The industry has been down this path before. When the FCC auctioned off the PCS spectrum in the mid-1990s, it essentially guessed that five wireless carriers (the existing two cellular carriers plus the A, B, and C PCS spectrum blocks) was the appropriate number of firms for the market and also supposed that regional—as opposed to national—geographic licensing would be appropriate.\textsuperscript{28} Prior research has demonstrated that because significant fixed and sunk costs are inherent in the telecom industry, the number of firms will tend to reach a relatively concentrated equilibrium.\textsuperscript{29} But the FCC could not have known in the early 1990s whether or not five wireless carriers was ideal, and it erred on the side of caution by auctioning off several licenses in distinct geo-

\textsuperscript{26} These mergers include continued consolidation among cable multiple system operators, such as the 2006 acquisition of the Adelphia cable systems by Comcast and Time Warner Cable. See \textit{In re Applications for Consent to the Assignment and/or Transfer of Control of Licenses; Adelphia Communications Corporation, (and subsidiaries, debtors-in-possession), Assignors, to Time Warner Cable Inc. (subsidiaries), Assignees; Adelphia Communications Corporation, (and subsidiaries, debtors-in-possession), Assignors and Transferors, to Comcast Corporation (subsidiaries), Assignees and Transferees; Comcast Corporation, Transferor, to Time Warner Inc., Transferee; Time Warner Inc., Transferor, to Comcast Corporation, Transferee, Memorandum Opinion and Order, 21 F.C.C.R. 8203, ¶¶ 1–5 (July 13, 2006) [hereinafter Adelphia Order].

graphic areas. If the natural equilibrium structure favored fewer and larger national players, then mergers should have been expected as a natural consequence of this initial policy choice in selecting a "starting point." Accordingly, the subsequent wave of wireless mergers was an entirely logical outcome and reaction (or "sorting") by the market in response to a deliberate public policy choice. Antitrust agencies and the FCC may view such developments in a different light: to an antitrust agency, rapid consolidation may signal an imminent competition problem, while to the FCC, such rapid consolidation is the expected consequence of a conscious public policy choice. In this environment, traditional tools of antitrust analysis might not present a complete picture of the emerging competitive dynamic.

The same can be said for competition issues relating to vertical conduct and acquisitions. The trend in antitrust law has been not to review "vertical" mergers closely, based on the arguments of scholars that such transactions often promote economic efficiency and only rarely have adverse competitive effects. In contrast, public policy has traditionally treaded more carefully re-

---

32 Many courts have found this to be true. See, e.g., United States v. Baker Hughes Inc., 908 F.2d 981, 986 (D.C. Cir. 1990) (Thomas, J.) (explaining that market share statistics can be "easily skewed" and sometimes "volatile and shifting") (internal citation omitted); S. Pac. Commc’ns Co. v. AT&T, 740 F.2d 980, 1000 (D.C. Cir. 1984), cert. denied, 470 U.S. 1005 (1985) ("A predominant market share may merely be the result of regulation, and regulatory control may preclude the exercise of monopoly power . . . . In such cases market share should be at most a point of departure in determining whether monopoly power exists."); Metro Mobile CTS, Inc. v. New Vector Commc’ns Inc., 892 F.2d 62, 63 (9th Cir. 1989) ("Reliance on statistical market share in cases involving regulated industries is at best a tricky enterprise and is downright folly where . . . . the predominant market share is the result of regulation."). See also Duncan Cameron & Mark Glick, Market Share and Market Power in Merger and Monopolization Cases, 17 MANAGERIAL & DECISION ECON. 193, 193 (1996) (asserting that "legal precedent requiring the courts to draw inferences about market power based primarily or exclusively on market shares and/or market concentration can often be misleading . . . . [T]he only alternative to such judge-made bright-line rules is to utilize modern economic tools to undertake more extensive competitive analyses").

garding vertical issues in the communications industry. These concerns have been notable in the context of access to video programming. Congress has passed laws that limit the ability of cable systems to restrict the distribution of video programming networks to rivals. Since many cable firms are vertically integrated with the most popular programming networks, concerns over whether cable mergers would impact the distribution of such programming networks play an important role in the FCC’s merger review process.

In reviewing cable industry mergers, the FCC makes a careful determination as to whether such programming distribution issues are better resolved through company-specific, merger-specific conditions, or whether existing program access laws, which apply to the industry generally, are sufficient. For exam-

34 In re Teleprompter Corporation; Theta Cable of California; Northwest Cablevision, Inc. d/b/a Teleprompter of Seattle; Teleprompter Southeast, Inc.; Teleprompter Corporation; Teleprompter Southeast, Inc. d/b/a Teleprompter of Boca Raton; Teleprompter Southeast, Inc.; Teleprompter Corporation; Teleprompter Corporation; Teleprompter Corporation; Teleprompter Southeast, Inc.; Teleprompter of San Bernardino, Inc.; Teleprompter Newburgh Cable TV Corp.; Teleprompter of Portsmouth, Inc.; Teleprompter of Mohawk Valley, Inc.; Teleprompter Island Cable TV Corp.; Focus Cable of Oakland, Inc.; El Paso Cablevision, Inc.; Mobile TV Cable Company, Inc.; Teleprompter of Fairmont, Inc. Teleprompter Corporation; Teleprompter Corporation d/b/a Teleprompter of Reno; Northeast Minnesota Cable TV, Inc.; Garden State Television Cable Corp.; Teleprompter Corporation d/b/a Teleprompter of Tucumcari; Teleprompter Corporation d/b/a Teleprompter of Ukiah; Teleprompter Corporation d/b/a Teleprompter of Santa Cruz; Teleprompter Corporation; Teleprompter Florida CATV Corp.; Teleprompter Corporation; Applications for Transfer of Control in the Cable Television Relay Service, Memorandum Opinion and Order, 87 F.C.C.2d 531, ¶ 61 (July 30, 1981). In reviewing this cable industry merger, the Commission observed that:

[V]ertical integration has conflicting components, in terms of the incentives involved. While it may create a natural tendency for the systems involved to deal with affiliated enterprises, it is also the engine for the creation of new products and services to increase the value of the total package of services offered [to] the public. Given the conflicting incentives involved, we believe it would be inappropriate to conclude on any general basis that vertical integration is undesirable. Rather, what appears to be required is scrutiny of particular aspects of these vertical relationships for adverse consequences.

Id. (emphasis added) (citation omitted).

36 According to the FCC’s last Cable Competition Report, five of the top seven cable operators—Comcast, Time Warner, Cox, Cablevision, and Advance/Newhouse—hold ownership interests in satellite-delivered national programming networks. In total, 84 satellite-delivered national programming networks are affiliated with one or more of these cable operators. In re Annual Assessment of the Status of Competition in the Market for the Delivery of Video Programming, Thirteenth Annual Report, 24 F.C.C.R. 542, ¶ 186 (Jan. 16, 2009).
ple, when the FCC reviewed the acquisition of Adelphia Cable by Time Warner Cable and Comcast, it found that transaction would enable Comcast and Time Warner to raise the price of access to regional sports networks (like Comcast SportsNet) by imposing uniform price increases applicable to all multichannel video programming distributors, including their own systems.\(^3\) The Commission found that “[s]uch a strategy is likely to result in increased retail rates and fewer choices for consumers seeking competitive alternatives to Comcast and Time Warner.”\(^8\) The FCC found that the acquisition, by increasing the regional “clustering” of cable networks in geographic areas, would enhance the cable firms’ ability to force local sports teams and local sports viewers to deal with the local cable company with regard to showing such sports events on cable television.\(^9\) To resolve this merger-specific harm, the FCC approved the transaction subject to the imposition of narrowly-tailored merger-related arbitration conditions designed to alleviate the regional sports programming problem.\(^4\) But the FCC refrained from imposing broader obligations in response to arguments from competitors that they generally were having difficulty obtaining affiliated, national programming from Time Warner and Comcast.\(^4\) In that context, the FCC did not impose conditions because it reasoned that the existing program access rules were the appropriate forum to handle such disputes.\(^4\)

In summary, the FCC has the legal obligation to review communications industry mergers. This dual review is not unique to the FCC and is also present in other industries like banking and energy.\(^4\) The sheer breadth and complexity of the communications industry necessitates this dual review, because communications industry transactions reflect not only questions of static economic efficiency and market power, but they also reflect the shifting of regulatory policy and technological change. As the Supreme Court said in *Brand X*, “[n]othing in the Communications Act or the Administrative Procedure Act makes unlawful the Commission’s use of its expert policy judgment to resolve these difficult questions.”\(^4\)

III. THE "PUBLIC INTEREST" STANDARD REQUIRES A THOROUGH ECONOMIC ANALYSIS OF COMPETITIVE ISSUES

Properly applied, the FCC's "public interest" merger review authority can navigate these waters and take into account the complex and unique characteristics of the communications industry. Precedent makes clear that in reviewing mergers pursuant to the public interest standard, the FCC must consider competitive effects and conduct a rigorous economic analysis. While one can dispute the FCC's application of economics in many prior proceedings, any argument that the "public interest" standard is devoid of meaning under current law (and, therefore, that the FCC should abdicate its core responsibilities and defer to the DOJ or FTC) simply is not supported by case law.

While regulatory agency and antitrust merger review are different, they do share many of the same goals. As the D.C. Circuit first stated in 1968—and later reaffirmed in 1980 in United States v. FCC—the "basic goal of governmental regulation through administrative bodies and the goal of indirect governmental regulation in the form of antitrust law is the same—to achieve the most efficient allocation of resources possible." As a result, the D.C. Circuit "has insisted that the [administrative] agencies consider antitrust policy as an important part of their public interest calculus." In Town of Concord v. Boston Edison Co., now Supreme Court Justice Stephen Breyer wrote that the goals of regulation and antitrust laws are "low and economically efficient price-

45 The universal requirement to consider competitive effects under the public interest standard stands in direct contrast to other, more politically-charged topics, like employee job concerns, which may only be considered when the statute provides specific language ordering the administrative agency to do so. See NAACP v. Fed. Power Comm'n, 425 U.S. 662, 670 (1976). The Supreme Court noted that employee job concerns did not fall within the scope of the Federal Power Commission's "public interest" inquiry to ensure "just and reasonable rates," because "the use of the words 'public interest' in a regulatory statute is not a broad license to promote the general public welfare." Id. at 669–70.

46 See supra text accompanying notes 8–24. But see Randolph J. May, The Public Interest Standard: Is It Too Indeterminate to Be Constitutional?, 53 FED. COMM. L.J. 427, 453 (2001) ("Congress must ask itself anew whether the public interest standard is indeed sufficiently 'concrete' to fulfill Congress' responsibility to set communications policies for the Information Age, or whether it is so vague that it can mean whatever three FCC Commissioners say it means on any given day."); RANDOLPH J. MAY ET AL., THE PROGRESS & FREEDOM FOUND., DIGITAL AGE COMMUNICATIONS ACT: PROPOSAL OF THE REGULATORY FRAMEWORK WORKING GROUP, RELEASE 1.0 21 (2005) (characterizing the "current model of regulation" as one "based on vague standards such as 'public interest' and 'just and reasonable'").

47 United States v. FCC, 652 F.2d 72, 88 (D.C. Cir. 1980) (quoting N. Natural Gas Co. v. FPC, 399 F.2d 953, 959 (D.C. Cir. 1968)).

48 Id.
es, innovation, and efficient production methods." As such, assertions that no relationship exists between antitrust and economic regulation completely miss the point. Indeed, as Supreme Court Justice Felix Frankfurter stated nearly sixty years ago, "[t]here can be no doubt that competition is a relevant factor in weighing the public interest." While FCC review must include some degree of competitive analysis, the FCC is plainly permitted to come to different conclusions than a strict antitrust review conducted by the DOJ or FTC may determine. Indeed, the seminal case regarding the FCC's public interest authority—United States v. FCC—resulted from the DOJ disagreeing with, and challenging in court, the FCC's approval of an important transaction in the satellite industry in the 1970s, which the DOJ believed was anticompetitive. In that case, the D.C. Circuit ruled in favor of the FCC, stating that all the FCC must do, in the exercise of its responsibilities, is "make findings related to the pertinent antitrust policies, draw conclusions from the findings, and weigh these conclusions along with other important public interest considerations." The United States v. FCC decision vividly shows that the FCC's authority, while it includes competition policies, is a separate and distinct duty from those of the antitrust enforcement agencies. In effectuating its duties, the FCC has a significantly different standard to guide its actions.

50 See, e.g., N. Natural Gas Co., 399 F.2d at 961 (stating that antitrust laws are a tool that a regulatory agency can use to bring "understandable content to the broad statutory concept of the 'public interest.'" (internal citation omitted). See also United States v. AT&T, 498 F. Supp. 353, 364 (D.D.C. 1980) (Green, J.) ("[I]t is not appropriate to distinguish between Communications Act standards and antitrust standards . . . [because] both the FCC, in its enforcement of the Communications Act, and the courts, in their application of the antitrust laws, guard against unfair competition and attempt to protect the public interest.").
51 United States v. FCC, 652 F.2d 72 (D.C. Cir. 1980).

For Assignments and Transfers of Ancillary Radio Facilities, Memorandum Opinion and Order, 7 F.C.C.2d 245, ¶ 15 (Dec. 21, 1966) ("The Antitrust Division is charged with the enforcement of the antitrust laws . . . while the Commission is charged with effectuating the policies of the Communications Act . . . ."); see also In re Time Warner, Inc., 123 F.T.C. 171,
The FCC’s charge is no easy task, given the complexity and rapidly-changing nature of the communications industry.\(^5\) The Hart-Scott-Rodino Act merger review process focuses upon whether the merged firm would be able to sustain a “small but significant and nontransitory” increase in price over a very short time-span and will examine entry that is likely to occur within two years.\(^6\) This approach, by definition, largely focuses the attention of the antitrust enforcement agencies on the current competitive environment and not on the environment that is likely to emerge over the next five to ten years. The FCC’s authority under the Communications Act is significantly broader because the FCC, like other administrative agencies, is “entrusted with the responsibility to determine when and to what extent the public interest would be served by competition in the industry.”\(^7\) Therefore, it is not unreasonable to

\(^7\) United States v. FCC, 652 F.2d 72, 88 (D.C. Cir. 1980). See Northeast Utils. Serv. Co. v. FERC, 993 F.2d 937, 947–48 (1st Cir. 1993). The court noted that the public interest standard does not require the administrative agency in question, the Federal Energy Regulatory Commission, “to analyze proposed mergers under the same standards that the [DOJ] . . . must apply” because an administrative agency is not required to “serve as an enforcer of antitrust policy in conjunction” with the DOJ or FTC, and thus, while the agency “must include antitrust considerations in its public interest calculus . . . it is not bound to use antitrust principles when they may be inconsistent with the [agency’s] regulatory goals.” Id. See also Nat’l Broad. Co. v. United States, 319 U.S. 190, 219 (1943) (explaining that Congress, through the Communications Act, “gave the Commission not niggardly but expansive powers.”); In re Applications of Craig O. McCaw and Am. Tel. and Tel. Co., Memorandum Opinion and Order, 9 F.C.C.R. 5836, ¶ 7 (Sept. 19 1994), aff’d sub nom. SBC Commc’ns v. FCC, 56 F.3d 1484 (D.C. Cir. 1995) (noting that the FCC’s “jurisdiction under the Commu-
expect the FCC to consider the ramifications of its policies over a longer period. Given this broader responsibility, it is incumbent upon the Commission, when reviewing industry transactions, to take a far more dynamic and flexible approach.\(^8\)

Still, commentators have argued that the FCC should simply abandon its merger review authority and defer all matters of competition analysis to the DOJ or FTC.\(^9\) But it is not entirely clear that the antitrust legal standards, particularly the "unfair competition" standard of Section 5 of the Federal Trade Commission Act,\(^6\) are also not subject to ad hoc manipulation by enforcement authorities and regulatory excess.\(^6\) FCC merger orders under the "public interest" standard are subject to judicial review, just as courts review consent decrees entered into by the government and merging parties pursuant to the Tunney Act.\(^2\) As such, the argument that somehow the DOJ/FTC process is in fact inherently "better" or "more consistent" is entirely subjective.

IV. WITH GREAT POWER COMES GREAT RESPONSIBILITY

Of course, while the FCC clearly has the obligation to examine competitive issues, a crucial question is whether there are any appropriate limits on the FCC's authority. Unfortunately, the FCC has in the past interpreted its mandate incorrectly, and did not limit its review to determining whether a merger is "in" or "consistent with" the public interest,\(^3\) but instead sought to utilize the

\(^{58}\) Olson & Spiwak, supra note 35, at 305–07. See generally Spiwak, supra note 23.

\(^{59}\) See, e.g., Weiser, supra note 7, at 198 ("A central challenge for regulatory agencies such as the FCC is to defer to the competition policy analysis of the DOJ as well as its choice of merger remedies. On balance, the agency's duplicative analysis has yielded few benefits while it has delayed merger approvals and imposed significant administrative costs.").

\(^{60}\) See supra note 5 and accompanying text. But see Donald J. Russell & Sherri Lynn Wolston, Dual Antitrust Review of the Telecommunications Mergers by the Department of Justice and the Federal Communications Commission, 11 GEO. MASON L. REV. 143, 154 (2002) (noting criticisms that FCC merger decisions are "effectively insulated from meaningful judicial review.").

\(^{61}\) See, e.g., Pacific Power & Light Co. v. FPC, 111 F.2d 1014, 1016 (9th Cir. 1940).
As noted above, critics have legitimately seized upon this inconsistency and claimed that the FCC has abused its authority to impose narrowly-tailored merger conditions and, therefore, cannot be trusted to uphold the basic maxim that competition policy—either by antitrust enforcement agencies or by administrative agencies—is designed to protect competition and not individual competitors. However, while the FCC has not always stuck to this fundamental precept, the law is clear that the FCC must exercise its public interest authority with analytical rigor and caution.

The most important limitation on the FCC's public interest standard is the precept that the focus of the standard is upon the interests of the public, and not the interests of competitors who may seek to use the merger process to hamstring a competitor. For example, in the 1981 case of Hawaiian Telephone v. FCC, the D.C. Circuit remanded an FCC grant of Section 214 authority for service between the U.S. mainland and Hawaii because it found that the Commission had engaged in an ad hoc approach that improperly aimed at “equaliz-

The court found that it is “enough if the applicants show that the proposed merger is compatible with the public interest. The Commission, as a condition of its approval, may not impose a more burdensome requirement in the way of proof than that prescribed by law.” Id. (emphasis added).

See, e.g., Bell Atlantic/NYNEX Order, supra note 2, ¶ 2. In that decision, the FCC, rather than requiring applicants to demonstrate that their proposed merger was in the public interest for any number of possible reasons (like efficiency savings that would lead to lower rates), the FCC stated that

[j]n order to find that a merger is in the public interest, we must, for example, be convinced that it will enhance competition. A merger will be pro-competitive if the harms to competition . . . are outweighed by the benefits that enhance competition. If applicants cannot carry this burden, the applications must be denied.”

Id. (emphasis added). Competition is certainly an important goal, but this singular focus on only that one public interest concern to the exclusion of others was, in our view, improper.

See sources cited supra note 7.

Cf Cincinnati Bell Tel. Co. v. FCC, 69 F.3d 752, 760 (6th Cir. 1995) (reversing FCC decision because the order contained no “expert economic data or [analogies] to related industries in which the claimed anticompetitive behavior has taken place” but instead justified its conclusions as “simply ‘common sense’”); FCC v. RCA Commc’ns, Inc., 346 U.S. 86, 93–95 (Frankfurter, J.) (noting that the FCC’s economic analysis may not primarily rely on a “reading of national policy” because agency’s actions were simply “too loose and too much calculated to mislead in the exercise of the discretion entrusted to it.”).

Hawaiian Tel. Co. v. FCC, 498 F.2d 771 (D.C. Cir. 1974). The “public interest” standard in the Communications Act is applied in many contexts, such as the granting of licenses, so court decisions on those topics, like Hawaiian Telephone, provide important insight on the limitations of the FCC authority in this area.
ing competition among competitors." The D.C. Circuit stated that FCC's public interest analysis must be more than an inquiry into "whether the balance of equities and opportunities among competing carriers suggests a change." The court found that it was "[a]ll too embarrassingly apparent that the Commission has been thinking about competition, not in terms primarily as to its benefit to the public, but specifically with the objective of equalizing competition among competitors."

Subsequent decisions reiterate the importance that consumer welfare analysis plays in the FCC's public interest standard. In 1995, various parties challenged the Commission's approval of the acquisition of McCaw Cellular licenses by AT&T by arguing that the FCC should have imposed the antitrust Modified Final Judgment ("MFJ") restrictions applicable to the Regional Bell Operating Companies ("RBOCs") on the merged firm. Citing Hawaiian Telephone, the D.C. Circuit rejected the merger opponents' arguments and found that the application of the MFJ restrictions to the merged entity would "serve the interests only of the RBOCs rather than those of the public." The court stated that when the Commission considers whether a proposed merger serves the public interest, the "Commission is not at liberty... to subordinate the public interest to the interest of 'equalizing competition among competitors.'"

The FCC's merger review authority is also indirectly limited by statute, in that merger conditions cannot be used to avoid statutory mandates. In 2001, the D.C. Circuit overturned the FCC's conditional approval of SBC's acquisi-

74 Id. (quoting Hawaiian Tel. Co. v. FCC, 498 F.2d 771, 776 (D.C. Cir. 1974) (emphasis added); see also W. Union Tel. Co. v. FCC, 665 F.2d 1112, 1122 (D.C. Cir. 1981) ("[E]qualization of competition is not itself a sufficient basis for Commission action."). One of the counter-arguments to this position is the often misguided notion that the naked "protection of competitors" is the analytical equivalent to attempting to promote tangible new entry into a market currently dominated by a monopoly incumbent. It is not. As the FCC's former chief economist argued, it is "important that the playing field should be leveled upwards, not downwards" because "rules that forbid a firm from exploiting efficiencies just because its rivals cannot do likewise" harm, rather than improve, consumer welfare. Joseph Farrell, Creating Local Competition, 49 FED. COMM. L.J. 201, 212 (1996). In highly concentrated industries, the focus of policy should be on regulation that promotes competitive entry, rather than regulation that protects competition. The latter will often turn into the mere protection of the private interests of competitors.
75 Section 303(r) of the Communications Act provides that "except as otherwise provided in this chapter, the Commission... shall prescribe such... conditions, not inconsistent with law, as may be necessary to carry out the provisions of this Act." 47 U.S.C. § 303(r) (2006) (emphasis added).
tion of Ameritech, holding that the FCC unreasonably used its merger review authority to attempt to allow the merged entity to avoid section 251 obligations by means of a merger condition. This SBC/Ameritech merger condition permitted the merged firm to provide advanced services through a separate subsidiary that would not be subject to the unbundling and resale provisions of section 251 of the Act. Competitors challenged that decision, arguing that the FCC’s condition was “simply a device to accomplish indirectly what the statute clearly forbids . . .” and constituted an unreasonable exercise of the FCC’s merger review authority. The D.C. Circuit agreed and called the FCC’s action an attempt to “sideslip § 251(c)’s requirements . . . .” Therefore, while the FCC has statutory authority to review and condition mergers, it does not have the authority to use merger conditions to circumvent the statutes the agency is charged with administering.

Finally, legal scholars have expressed concern that the authority to review mergers is a powerful tool that can easily be misapplied. With regard to important industry transactions, this “hold up” power borders on granting the agency absolute power for which there is no check or balance. If agencies approach this task without self-limiting their use of this authority, then the potential to use the process to aggrandize authority and abuse it will be strong. As Judge Frank Easterbrook observed well over twenty five years ago:

Often an agency with the power to deny an application (say, a request to commence service) or to delay the grant of the application will grant approval only if the regulated firm agrees to conditions. The agency may use this power to obtain adherence to rules that it could not require by invoking statutory authority. The conditioning power is limited, of course, by private responses to the ultimatums—firms will not agree to conditions more onerous than the losses they would suffer from the agency’s pursuit of the options expressly granted by the statute. The firm will accept the conditions only when they make both it and the agency (representing the public or some other constituency) better off. Still, though, the agency’s options often are potent, and the grant

Thus, FCC Commissioners should exercise restraint on their collective or individual efforts to use the FCC’s merger authority to alter the industry through “voluntary” merger commitments that would otherwise be unobtainable through the “normal channels.”

Accordingly, while the FCC is well within its authority to issue narrowly-tailored conditions as appropriate to remedy a merger-related harm, viewing industry mergers as opportunities to promote or jump-start an affirmative public policy agenda via so-called “voluntary” merger commitments—particularly if policymakers are frustrated by an inability to achieve a political consensus on nationwide rules of general applicability—is a troubling extension of regulatory authority by the FCC. While it may be appealing for policymakers to attempt to advance a policy agenda through merger conditions, using the leverage of the merger review process to force a particular outcome down the throats of one particular firm in the industry ultimately may constitute a violation of the public trust. Instead of acting consistent with the public interest, the FCC would be advancing a public policy agenda for which it otherwise may not have the legal authority or political support.

Moreover, coercing merging parties to accept “voluntary” commitments may fail to solve industry-wide problems with industry-wide solutions. For example, AT&T and Verizon respectively agreed to conduct their businesses in accordance with the Commission’s Broadband Internet Access Policy Statement as part of voluntary merger commitments made in relation to the SBC-
AT&T and Verizon-MCI mergers. Yet, the nation’s cable industry, which provides more residential broadband connections than AT&T and Verizon combined, has not been subject to that same network neutrality regime, nor has Qwest, BellSouth, or the nation’s other local telephone or wireless companies. The merits of such a policy should be debated and considered on an industry-wide basis in a forum of industry-wide applicability. Only in that setting can the industry and the public actively participate in its construction, application, and uniform enforcement.

The merger condition drafting and adoption process as a practical matter does not live up to this obligation, as it often occurs in negotiations between the FCC and the merging entities with very little opportunity for public input and review. Are consumers really well-served by backroom, closed-door negotiations between the regulator and prospective merging parties over important public issues? The opportunity for the regulator and the regulated to game such
a system to the exclusion of important consumer and competitor interests is strong.

In conclusion, while it is appropriate to impose narrowly-tailored conditions to remedy specific merger-related harms when consumer welfare is at risk, to the extent there are policy issues of generic concern, those issues are better handled in an agency proceeding where they can be effectively dealt with in a focused, comprehensive, and public manner.89

V. CONCLUSION

Without question, the FCC has the authority and obligation to review communications industry mergers. But this authority is constrained: precedent demands that the FCC establish and carry out a cohesive and rigorous approach to merger review that is supported by the law, economics and, of course, the facts. Merger conditions must take into account competitive factors but also must be in the "public interest" and not the interest of individual competitors that are looking to saddle their rivals with unique regulatory burdens.

While there are restraints on the FCC's merger authority, the public interest standard does give the agency great power. Such power begets temptation—including the temptation to seek to accomplish through merger conditions policy outcomes that would otherwise be difficult to obtain. But FCC Commissioners should exercise restraint in their efforts to regulate through so-called "voluntary" merger commitments. Important public policy issues deserve to be debated openly in industry-wide settings and should not be hidden in the back-rooms of the FCC.

89 The FCC has recognized this principle. See Adelphia Order, supra note 26, ¶ 192 ("We find that some of the concerns raised are not transaction-specific and are more appropriately addressed in other proceedings.").
